

# Barcodes

Prior to submission of this file, some of the barcodes contained herein were assigned to items and employees in our system in order to test it out. Other barcodes within this document, at the time of upload, are unused. The barcodes we initially set up are labelled: employee name on top and equipment type followed by size on the bottom. All barcodes were generated using <http://www.barcode-generator.org/> - in the event more barcodes are needed for testing (adding equipment or employees) at the time of grading, this site is simple and free to use. The barcode scanner will pick up the first one it detects, so the best means of ensuring you grab the barcode you intend, is to have that be the only one on easily seen or near the camera when scanning.
